③ Dear Ben,

Thank you for your letter, I liked it a lot: so inspiring and full of joy! I'm glad you enjoyed being in Australia, seeing all those animals. I apologize I didn't answer you earlier, didn't have enough time.

My last summer I spent in Spain, on so called Costa Brava, it's not far from Barcelona, which I visited during that trip. I saw the famous park Guel, the ancient gothic area and

Sagrada familia. It's unbelievable! One day I'd like to visit the United States because I have many friends there and it would be nice to travel with them.

Write back soon.

Best wishes,

Emma.

④ Today it is impossible to imagine a world without computers. They are used at schools, offices, hospitals and many other places. But can you replace workers using electronic devices instead?

In my opinion, computers can help people make their job easier but they cannot replace them. The benefit of modern devices is that they process information a lot faster than humans do. But you cannot learn the machine to think so you always need a person to give instructions to it. Also, computers cannot express emotions and therefore you cannot replace, for example, a teacher, as you have to interact with the students.

I think some people believe that in the future computers will replace people as they think that machines will become intelligent. They also say that electronic devices can make the work done more effectively than humans.

I cannot agree with this point of view as I think that computers have some crucial limitations which prevent them from replacing people. Also, I believe that there are plenty of jobs where people will be more effective.
